

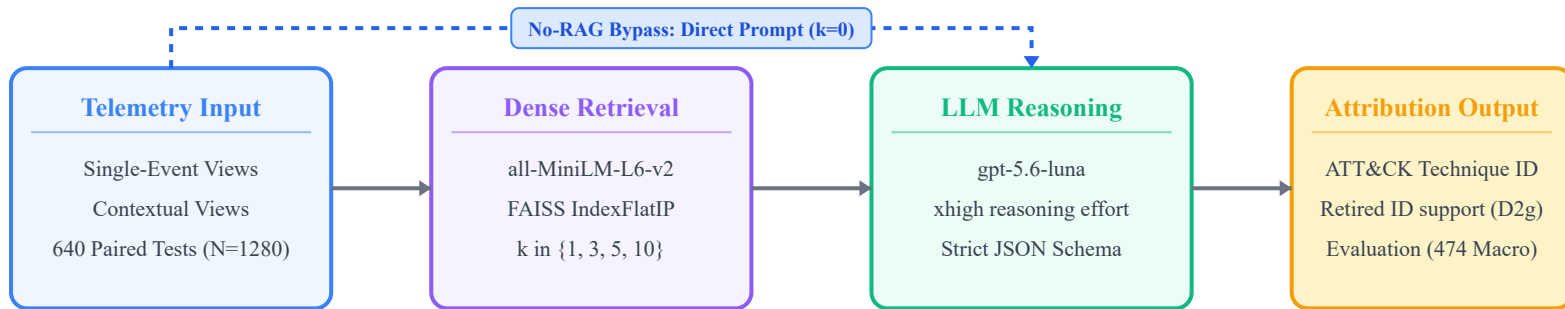

## Figure 1: RAG2ATTCK Dual-View Attribution Architecture

Controlled evaluation pipeline across 5 conditions with strict monetary and ledger governance

### Protocol & Budget Governance Controls (Decisions D1–D7)

- **D1: RECORD\_ONLY Prompt Policy**
  - Original model responses recorded verbatim
  - Zero in-flight prompt alterations or retries
- **D2: Evaluation & Denominators**
  - ANY\_MATCH ground truth; 718 mapped views
  - Universe evaluated across 474 frozen classes
- **D3 & D4: Concurrency & Identity**
  - Strict sequential live execution (concurrency=1)
  - Timestamped system fingerprint & response IDs
- **D5: Study Budget Ledger Guard**
  - Strict \$19.99 cap; \$0.0526 hold per request
  - Atomic dual-lock ledger pre-reservation
- **D6 & D7: Benchmark Dataset Scope**
  - Pair-wise synthetic enterprise telemetry
  - Generalization to live production unsupported
- **Independent Failure Axes (D2i)**
  - Retrieval misses and generation errors
  - Evaluated independently without forced causality
